

Welcome to the new PoshCode wiki, brought to you by the folks behind the [PoshCode](#) script repository. We're working on some exciting new things, and thought we'd kick things off by setting up a wiki which will be fair game for any PowerShell related content. Deki Wiki is exciting because it has a great API which is accessible from PowerShell (we've already published the [first set of scripts](#) for working with it), and is really user-friendly, with a great WYSIWYG editing interface and everything.

We've already started importing the [help for PowerShell Cmdlets](#) using scripts, so please sign up and start pitching in!
